ECO-602 Environmental Data Analysis Lecture

In-class Assignment: Data File

```
require(here)
dat_cat = read.csv(
  here("data", "catrate.csv")
)
require(here)
dat_rope = read.csv(
  here("data", "rope.csv")
)
require(here)
dat_delomys = read.csv(
  here("data", "delomys.csv")
)
```

I was absent from lecture for this in-class assignment, so I worked on it independently. One issue I ran into was adding the “.csv” to the end of the file name when asking for it in “here”. It took me a few tries of trouble shooting and changing the name in the code, but I finally figured it out after going through previous R assignments and labs on github.
